Want to prevent motor burnout?

ATC & Diversified Electronics offers an economical solution that can allow you to see real-time motor measurements anytime, anywhere from your phone, tablet, or computer. Our solution can also help you prevent major motor issues by using this data to track motor health over time, saving you from costly repairs and downtime.

The Solution

Harness the power of MPA2 + SENSERT

Maximize motor performance and efficiency with the MPA2 Motor Protection Analyzer, enhanced by the SENSERT remote monitoring system. Gain instant access to vital motor data from any location, 24/7, allowing for real-time decision-making. Customize alerts to notify you via push notification, text, or email about any irregularities, ensuring you're always a step ahead. This powerful duo not only prevents potential issues but also ensures continuous, efficient operation, providing you with complete peace of mind regarding the health of your motors.

Key Benefits

Access Critical Info Anytime, Anywhere
Set thresholds and receive alerts when activity is abnormal, or check motor status reports as needed.

Reduce Emergency Repairs
Catch issues early before unplanned downtime occurs. Manage small problems before they're major repairs.

Make Predictive Maintenance a Reality
Log motor health and identify trends over time. Make future maintenance decisions on actual data.

MPA2 + SENSERT

Critical Data Reporting

MPA2 measures and analyzes:
- Current
- Voltage
- Frequency
- Power Factor (PF)
- Reactive Power (KVA)
- Real Power (KW)
- Energy Consumption (KWH)

Remote Monitoring & Alerts

SENSERT provides:
- Real-time data monitoring
- Access key information anywhere, at any time
- Alerts sent based on custom thresholds
- Data logging to identify trends over time
