MB KIT SYSTEMS

MB Kit Systems is the industry leader in engineering & design support utilizing structural aluminum framing and modular components in factory automation, manufacturing, and assembly applications. For decades customers have trusted us to design and build specialty solutions for both simple and complex applications. Using the highest-quality products enables systems to be designed to increase efficiency, improve appearance and create flexibility in production environments. From beginning to end, your project is engineered and built to perfection.

MODULAR SOLUTIONS

Structural aluminum and modular components are used to replace welded, painted steel in many applications. New designs in fastener technology result in joints that are as strong as welded steel, yet weigh significantly less and allow for quick adjustments. Additional components can be added at any time to your modular application.

ENGINEERING SERVICES

One of MB Kit Systems' greatest strengths lies in the depth and experience of our in-house engineering team. Being highly trained in the use of structural aluminum, our engineers create the highest quality mechanical solutions using a wide range of extruded aluminum and components, which are designed with your exact project specifications. 3D drawings and quotes are created to strategically assist in the planning and designing process, while being provided promptly, dependent on the complexity and scope of your project.

DELIVERY

KIT

Cost-effective
Pre-machined profile with
hardware and components

ASSEMBLY

Ready-to-go
Fully or sub-assembled
